

WAVETHRU

Your building blocks mobile signal? WAVETHRU unlocks it.

LEGACY BUILDINGS

WAVETHRU is the on-site solution to restore mobile connectivity blocked by energy-efficient facades

WAVETHRU is a patented laser process applied directly to your existing glazing. Our on-site treatment creates invisible micro-patterns in the Low-E coating, allowing mobile signals to pass through freely while remaining undetectable to the naked eye. The result is a passive, future-proof solution that ensures universal connectivity with no impact on the glass's thermal performance or aesthetics.

Benefits

• UNIVERSAL & FUTURE-PROOF CONNECTIVITY

WAVETHRU provides total compatibility across all mobile operators and technologies (4G, 5G and critical communication). Because the solution is purely physical, it is inherently future-proof, ensuring performance for all upcoming network evolutions without ever needing an update or maintenance.

• SIMPLE & DISCREET ON-SITE INTERVENTION

Our team comes to your location to perform the WAVETHRU treatment directly on your existing windows. The intervention is fast, quiet, and requires no construction, material installation or wiring. Your occupants get a perfect signal without even noticing we were there.

• SUSTAINABLE & COST-EFFECTIVE

Unlike costly and complex active systems (DAS, repeaters) that require constant power and ongoing maintenance, WAVETHRU is a completely passive solution. It guarantees connectivity for the life of the building with zero electricity consumption, no emissions, and no upkeep, delivering significant and permanent cost savings.
